

**Amendment to the specification:**

Please replace paragraph [0011] (Page 2, Paragraph 4) with the following amended paragraph:

[0011] A further embodiment of the invention is characterized in that the first antenna element is a mono-pole antenna. The mono-pole is a very simple form of antenna that can function as the radiating element in an antenna and as a reflector or director and is thus especially suitable for use in the arrangement ~~ement~~ according to the present invention.

Please replace paragraph [0033] (Page 5, Paragraph 2) with the following amended paragraph:

[0033] FIG. 1b ~~1a~~ shows another implementation of a communication device comprising an antenna arrangement comprising two mono-pole antennas. Here the communication device 6 is required to operate at two frequencies simultaneously. Each antenna 9,10 is therefore dedicated to a separate transceiver 7, 8. In FIG. 1b antenna 9 is dedicated to transceiver 8 and antenna 10 is dedicated to transceiver 7. For this reason no switching is required. The transceivers 7,8 have an input 13, 12 and an output 16, 15.
